ECOCLASS

POLYVINYL CHLORIDE (PVC)

PVC boards, composed of a lightweight foam core between solid PVC sheets, offer versatility and durability. Their lightweight nature facilitates easy handling and installation while remaining resistant to impact and wear. Available in various thicknesses and sizes, PVC boards can be tailored to specific project requirements through easy cutting and shaping. With inherent moisture and chemical resistance, they excel in environments where exposure to water and chemicals is a concern. The foam core contributes insulating properties, making PVC boards suitable for applications requiring thermal or acoustic insulation. These boards are easy to maintain, with resistance to stains, and find applications in diverse projects such as signage, wall cladding, furniture, and more. Despite their advantages, it's crucial to consider environmental impacts, as PVC production and disposal can pose sustainability challenges, prompting exploration of alternative, eco-friendly materials in various projects.
